3
4      ;----- FIRMWARE OPERATING SYSTEM -----
5      ;
6      ; for the
7      ; VEHICLE AUTOMATED CONTRABAND INSPECTION
8      ; SYSTEM (VACIS)
9      ; 12-AUG-96
10     ;
11     ; by Eric Ackermann/Ken Valentine/Jeff Adams
12     ; Instrument Products Organization
13     ; Copyright 1996,97,98,99 by SAIC
14
15     ;
16     ;----- This work is dedicated to the memory of Ken -----
17
18     ;
19     ; The target CPU is a DALLAS 87C520 zP running
20     ; at 24 Mhz.
21
22     ;----- REVISIONS -----
23     ;V00.0 - As released for 24 Mhz crystal and
24     ; RS-485 half-duplex serial communications.
25     ; Serial comm handled by Siemens SAB 82526
26     ; High Level Serial Communications Controller.
27     ; SCC is operated as a slave in Normal Response
28     ; Mode with Buad Rate set by the Master's
29     ; (System Controller's) clock.
30
31     ;** 12-AUG-96 **
32
33     ;V01.2 Cleaned up the buffer handling of counter data
34     ; in order to fix bug of not ignoring the unused
35     ; counters. Added the WRITE_DAC command handler.
36     ; Uncommented the DAC init. Added READDAC command.
37     ; Added Counter Reset command.
38     ;** 20-JAN-98 **
39     ;** Jeff Adams **
40     ;V01.3 Added Stretch Memory to DAC communication. This
41     ; is needed as running at full speed violates min
42     ; WR pulse width of AD7228 DACs.
43     ;** 21-JAN-98 **
44     ;** Jeff Adams **
45     ;V02.0 Removed unused code, added comments, fixed minor bugs
46     ; and renamed file to VACIS2.ASM from VACISBBD.ASM in
47     ; preparation for first system demo.
48     ;** 26-JAN-98 **
49     ;** ESA **
50     ;V02.1 Put SJMP NXT_IC line back in for proper counter
51     ; reading. Done by JA 1-29-98, documenting now.
52     ;** 11-FEB-98 **
53     ;** ESA **
54     ;V02.2 Set default DAC (discriminator) setting to optimum value
55     ; of 225.
56     ;** 11-FEB-98 **
57     ;** ESA **
58
59     ;unreleased Add packet mode for PC to slave comm.
60     ;** 12-JAN-99**
61     ;** ESA **
62
